

WHAT YOU NEED TO KNOW BEFORE FLIGHT

FlightRisk is a next-generation aviation risk assessment system designed to elevate safety, enhance decision-making, and streamline flight operations. Unlike traditional, subjective FRAT-style tools that depend heavily on a pilot's personal perception of risk, FlightRisk delivers objective, regulation-based risk advisories derived from published rules, procedures, and best practices. The result is a system that goes beyond compliance—it facilitates informed action on every flight.
