SMS FOQA Add-on

FDM/FOQA

Identifies the "WHATs"

Helps Understand the "WHYs"

Internal Factors

-  Fatigue
-  Knowledge
-  Procedure

External Factors

-  Low Illumination
-  Mountainous Terrain

Elevating Safety Together

SIMPLE. MEANINGFUL. SEAMLESS

By integrating FDM/FOQA into VOCUS SMS, users can streamline the identification, tracking, and causal analysis of objectively measured events.

Why FDM/FOQA?

FDM/FOQA is important because it *automatically* and *objectively* captures specific aircraft deviations (e.g., incomplete flight controls checks, unstable approaches). By tracking and trending this information, organizations can see where they need to allocate safety resources.

Why VOCUS SMS?

VOCUS SMS is an organizational safety management system that simplifies and streamlines the safety process. The intuitive user interface and comprehensive task management tools ensure that problems, once identified, are quickly controlled.

Benefits of an integrated **VOCUS SMS** & **FDM/FOQA** solution:

- **Saves Time:** Avoid double-data entry.
- **Improves Accuracy:** Reduce errors caused by manually inputting data into VOCUS SMS.
- **Comprehensive Reporting:** Get a more detailed look at events by linking FDM/FOQA reports to pilot-submitted reports.
- **Detailed Insights:** Use VOCUS SMS to help identify the causal factors – human, organizational, environmental, and mechanical – of FDM/FOQA events

Elevating Safety **Together**
